TITLE: Mobile communication system e.g. personal hand held
phone - has group reference part to search all
registration data of mobile terminal equipments in one
group and transmit it to exchange

ABSTRACTED-PUB-NO: JP 08140141A

BASIC-ABSTRACT:

The mobile communication system consists of a database (24) which registers and memorizes data about multiple mobile terminal equipments (21). A registration data report part (25) reports a registration data of the mobile terminal equipment. A display part (35) displays the call state data of the mobile communication equipment. An operation part (27) forms the operation data which is transmitted to the station. The registration situation of the mobile terminal equipment received from the station is fed to the database.

The registration data of all other mobile terminal equipments is obtained. A group call controller (30) transmits the call state data. A terminal group memory (33) stores the registration data of the mobile terminal equipments as one group. A registration data storage part (31) stores the registration data of the mobile terminal equipment. A group reference part (34) searches all the registration data of the mobile terminal equipment in one group and transmit it to the exchange.

ADVANTAGE - Improves efficiency of system.
